변이형 인코더 (VAE)

먼저 이 장에서 발생할 수 있는 오류가 크게 두 가지 있으니 해결 방법을 알아봅니다.

만약 .ipynb 파일을 GDL_code 파일 안에 생성하지 않았다면,

첫번째는 경로오류 문제로 아래와 같은 메세지가 뜹니다.

No module name named 'utils'

No module name named 'models'

[WinError 3] 지정된 경로를 찾을 수 없습니다: 'run/vae/0001_digits'

이는 모두 GDL_code 파일에 있는 utils 파일, models 파일, data 파일, run 파일을 불러 올 수 없어서 생기는 경로오류 문제입니다.

이를 해결하려면,

첫번째 방법,

GDL_code 파일에 있는 utils 파일, models 파일, data 파일, run 파일을 복사 후 생성한 파일이 있는 경로와 동일한 곳에 붙여넣기 하는 방법과

두번째 방법,

GDL_code 파일 안에 .ipynb 파일을 생성하여 작업하는 방법 두 가지가 있겠습니다.

다른 하나는 라이브러리가 설치되지 않는 문제로 아래와 같은 메시지가 발생합니다. (다음 슬라이드 사진 첨부)

Failed to import 'pydot'. Please install 'pydot'. For example with 'pip install pydot'.

'pydot' failed to call GraphViz.Please install GraphViz (https://www.graphviz.org/) and ensure that its executables are in the \$PATH.

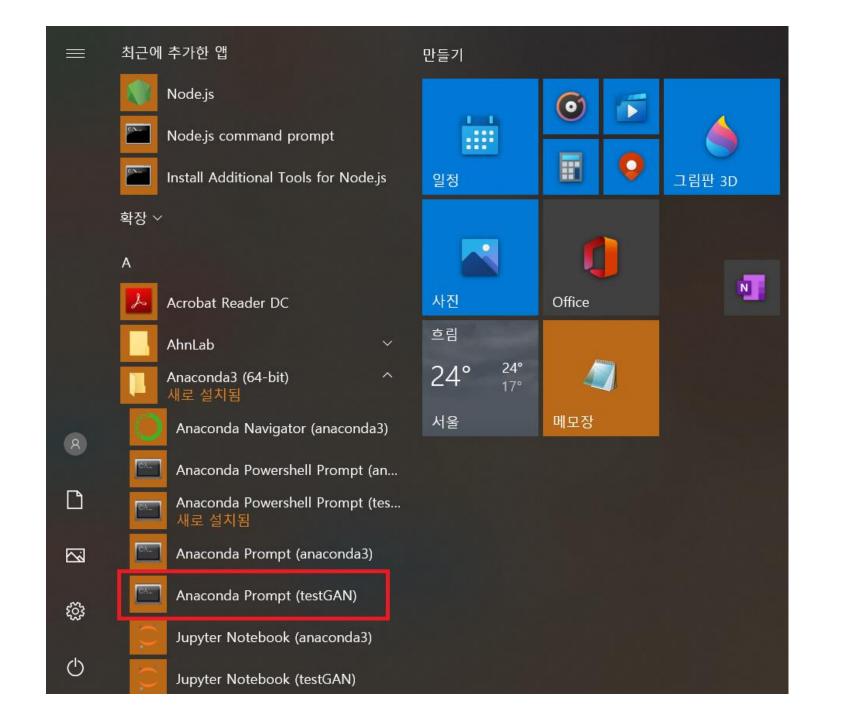

Anaconda Prompt (생성한 가상환경 이름) 으로 들어갑니다.

그러면 자동으로 생성한 가상환경으로 activate 된 프롬프트 화면을 볼 수 있고,

여기서 다음과 같은 명령어를 입력하여 사전에 오류를 방지합니다.

pip install pydot==1.4.1

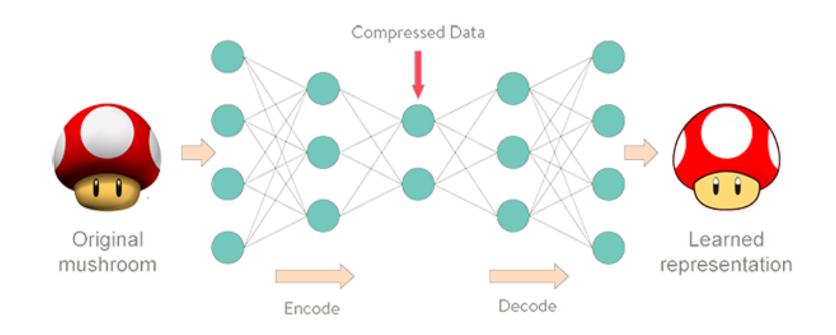

conda install GraphViz

Anaconda Prompt (testGAN)

```
(testGAN) C:₩Users₩User>conda install GraphViz
Collecting package metadata (current_repodata.json): done

  graphviz
Proceed ([y]/n)? y
```

이제 VAE(변이형 오토인코더; Variation AutoEncoder)를 알아보기 전에 기본적인 AE(오토인코더; AutoEncoder)를 만들어 보고 이를 확장하여 VAE를 구현해 봅니다.

```

이제 VAE(변이형 오토인코더; Variation AutoEncoder)로 변경해 봅니다. 바꾸어야 할 부분은 인코더와 손실함수 딱 두 군데입니다.

AE에는 각 이미지가 잠재 공간의 한 포인트에 직접 매핑됩니다.

VAE는 아래 그림처럼 이미지가 잠재 공간에 있는 포인트 주변의 다변수 정규분포에 매핑됩니다.

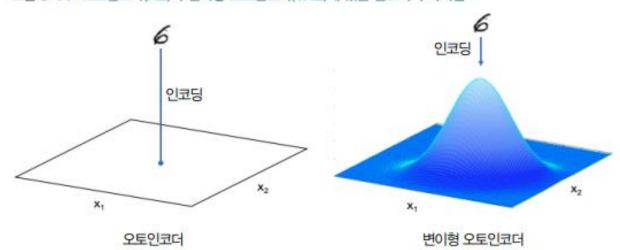

그림 3-11 오토인코더(AE)와 변이형 오토인코더(VAE)에 있는 인코더의 차이점

라이브러리 임포트

여기서 위와 같은 오류가 발생할 수 있는데,

이는 파일이나 디렉터리를 찾을 수 없어서 발생하는 오류로 run 파일을 그대로 복사해 왔기 때문에 발생합니다.

C:₩Users₩User₩VAE₩run₩vae 이나 본인이 run 파일을 복사 해 놓은 곳의 vae 파일에서 0001_faces 파일을 삭제해 준 후 커널을 셧다운 후에 다시 시작을 합니다.

44번 슬라이드 혹은 라인 2번에서 다시 파일을 생성 할 테니 과감하게 삭제해도 무방합니다.
